"Cipro-deficiency" dipstick

Asymptomatic bacteriuria

- Very common in the older patient
- Institutionalized residents more than community dwellers
- Abnormal urine does not always indicate UTI as the cause of their symptom(s)

A correct diagnosis is three-fourths the remedy.

Mahatma Gandhi

(f) quotefancy

Who should be treated?

- Who should *NOT* be treated?
 - Diabetic persons
 - Elderly individuals
 - Patients with indwelling catheters

Pathway for Asymptomatic bacteriuria

MINIMUM CRITERIA FOR UTI (MODIFIED LOEB CRITERIA^{1,2})

In a non-catheterized resident:	In a catheterized resident:	
 Acute dysuria <u>or</u> 2 or more of the following: fever [> 37.9°C (100°F) or a 1.5° C (2.4°F) increase above baseline on at least two occasions over the last 12 hours] new or worsening urgency frequency suprapubic pain gross hematuria flank pain urinary incontinence 	 Any one of the following after alternate explanations have been excluded: fever [> 37.9°C (100°F) or a 1.5° C (2.4°F) increase above baseline on at least two occasions over the last 12 hours] flank pain shaking ohills new onset delirium 	

¹Note that these are clinical criteria validated for diagnosis for UTI and differ from criteria that are used for surveillance.
²Note that confusion alone is not symptom of UTI in non-catheterized resident.

Choosing Wisely Canada

What is **NOT** an UTI

- These elements on their own are NOT diagnostic of UTI:
 - Worsening functional status
 - Worsening mental status (increased confusion, delirium, agitation)
 - Cloudy urine
 - Smelly urine
 - Change in urine color
 - Falls
 - Dehydration

Treatment of Uncomplicated UTI

- Uncomplicated UTI
 - Beta-lactam antibiotics
 - Amoxicillin 500mg tid for 3-7 days
 - Amoxicillin, Amoxicillin-clavulanate 500mg bid for 3-7 days
 - Nitrofurantoin (but avoid is CrCl < 35) 100mg bid for 5-7 days
 - Trimethoprim-sulfamethoxazole (TMP-SMX) DS bid for 3 days
 - Fosfomycin 3g po od x 1 single dose

Treatment of Uncomplicated UTI

- Uncomplicated UTI
 - Cephalexine 500mg tid for 5-7 days
 - Cefadroxil 1g once daily for 5-7 days
 - Cefuroxime 5-7 days
 - Cefaclor 500mg tid for 5-7 days
 - Cefixime 400mg od or 200mg bid x 1 day

Treatment of Complicated UTI

- Complicated UTI
 - TMP-SMX DS 1 tab bid for 7-14 days
 - Amoxicillin-clavulanate 875mg bid for 10-14 days
 - Fluoroquinolones
 - Ciprofloxacin 500mg bid for 7 days
 - Levofloxacin 750mg po once daily for 5 days
 - Moxifloxacin 400mg po once daily for 5 days

Treatment of uncomplicated Pyelonephritis

- Uncomplicated pyelonephritis
 - TMP-SMX DS 1 tab bid for 14 days
 - Amoxicillin-clavulanate 875mg bid for 10-14 days
 - Fluoroquinolones
 - Ciprofloxacin 500mg bid for 7 days

TMP-SMX CAN PRODUCE HYPERKALEMIA IN PATIENTS WITH DECREASED KIDNEY FUNCTION WHO ARE RECEIVING ACEI OR ARB
TMP-SMX WITH ORAL SULFONYLUREA WILL PRODUCE PROFOUND HYPOGLYCEMIA

FLUOROQUINOLONES WITH ORAL SULFONYLUREA WILL PRODUCE PROFOUND HYPOGLYCEMIA

Fluoroquinolones contain Floride as a central part of the drug.

Floride are able to penetrate into very sensitive tissues, including the brain (potent neurotoxin)

Flouroquinolones

Permanent peripheral nerve damage (neuropathy and CNS) – Blackbox warning in 2013 Up to 91% of patients **Tendinopathy (tendon** rupture, tendonitis, etc) balckbox warning in 2008 Up to 73% of patients

1.Acute psychosis
2.Schizophrenia
3.Hallucinations
 (Visual, auditory)
4.Fearfulness

1.Dizziness
2.Headaches
3.Confusion
4.Convulsions
5.Tremors
6.Neurologic disorders

IN MAY 2016, FDA RECOMMENDS AVOIDANCE OF FLUOROQUINOLONES FOR UNCOMPLICATED INFECTIONS

ACUTE EXACERBATION OF CHRONIC BRONCHITIS

URINARY TRACT INFECTIONS

ACUTE BACTERIAL SINUSITIS

1 Don Melady Retweeted

Joe Middleton @_JoeMiddleton · 5d "The Clinical Frailty Scale appears to be a valid and reliable instrument to identify frailty in the ED. It might provide ED clinicians with useful information for decision making in regard to triage, disposition, and treatment."

dx.doi.org/10.1016/j.anne...

Q 1	1]9	♥ 22	\uparrow
-----	-------------	------	------------

Don Melady @geri_EM · 2020-09-20 That's most emerg doc's perspective. Mine is that frailty is NOT like pornography because frailty has a precise definition and tools to identify and assess and quantify it. Emerg docs need to add awareness of frailty and its impact to every assessment of every older person.

 Zoi Netou-Kand... · 2020-09-20
 Don Melady from Canada on frailty: "Frailty is like pornography.
 I don't know what it is but I know when I see it."

"Who can make my healthcare decisions for me when I can't make them for myself?"

YOU – THE ER DOCTOR

Hours of operation:

Monday Tuesday Wednesday Thursday Friday 9:00 am - 4:00 pm 9:00 am - 4:00 pm

G-tube re-insertion

- Emergency and urgency of the insertion?
- What medications can be held until a new Gtube is re-inserted?
- What medications need to be given immediately?
- What alternatives can be given from the ebox?

Alternatives

- Substitute medications
- Hold medications
- Hypodermoclysis
- Send resident the next day early in the day (07:00 or 08:00am)
- Collaboration with hospital (and service) for coordinated protocol

	Level One – Supportive/Comfort Care This includes, but is not limited to, the provision of measures available within the resources of the facility such as: Pesition fig: Oral fluids; Positioning; Mouth care; Treatment of fever; Oxygen administration (if available); Suctioning. Diagnostic interventions and transfer to hospital will not normally be utilized for residents who request this level of Advance Directives. No cardiopulmonary resuscitation is requested.
	Level Two – Limited Therapeutic Care Care measures will include all procedures utilized in Supportive/Comfort Car as well as the
150	administration of antibiotics if indicated. Transfer to hospital may be arranged to provide comfort/treatment measures beyond the capability of the facility upon the direction of and at the discretion of the physician. No cardiopulmonary resuscitation is requested.
	Level Three – Transfer to Acute Care Hospital If symptoms indicate, the resident would be transferred to an acute care hospital for treatment. Assessment would be made in the acute care hospital emergency department and a decision made whether to admit the resident or return him/her to the Extendicare facility. No cardiopulmonary resuscitation is requested and no admission to an acute care intensive care unit.
	Level Four – Transfer to Acute Care with CPR Transfer to an acute care hospital will be arranged immediately. Cardiopulmonary resuscitation (CPR) will be provided by qualified staff, if available, and by ambulance personnel.
	Substitute Decision Maker:

Print Name

Resident/Substitute Decision Maker : • •

. .

Physician Signature

Date

Date

Other missing information

- Transfer to hospital without notifying the family/POA
- No clear indication who the SDM is
- No documentation of examination
 - The sending RN is often off shift and gone home.
 Vital signs from a month ago
- Poor documentation of baseline function
- Advanced directives not up-to-date

Definition

- Hypertensive Emergency (HE)
 - Sudden elevation in systolic BP and/or Diastolic BP that is associated with acute end-organ damage
 - Cardiovascular
 - Cerebrovascular
 - Renal
- Hypertensive urgency (HU)
 - Sudden elevation in systolic BP and/or Diastolic BP that is *NOT* associated with acute end-organ damage

Hypertensive Emergencies

TABLE 1. Hypertensive emergencies

Hypertensive encephalopathy Acute aortic dissection Acute myocardial infarction Acute coronary syndrome Pulmonary edema with respiratory failure Severe pre-eclampsia, HELLP syndrome, eclampsia Acute renal failure Microangiopathic hemolytic anemia

HELLP, Hemolysis, elevated liver enzymes, low platelets.

Management principles

- Hypertensive urgency can be treated in an outpatient setting with oral medications over 24-48 hours
- Medications could be
 - Beta-blockers
 - Diuretics
 - ACEI
 - ARB
 - CCB

How quickly do they need treatment?

- 1967 Veterans Affairs Cooperative Trial
 - Benefits demonstrated over months-years, not hours
 - The time to the first adverse event in the placebo arm was 2 months

JAMA. 1967; 202(11): 1028-1034

Hospitalization

- Total of 426 patients were referred to the hospital
 - 100 (0.17%) were admitted
 - At 7 days:
 - Primary outcomes (composite MI, stroke, TIA) were reached
 - » 0.1% in the discharged home pts
 - » 0.5% in the hospital pts
 - In those with SBP > 220
 - At 7 days:
 - Primary outcomes were reached
 - » 0.2% in the discharged home pts
 - » 0% in the hospital pts

What should we do?

- ACC/AHA 2017
 - "There is no indication for referral to the ED, immediate reduction in BP in the ED, or hospitalization for pts with hypertensive urgency"

EHR and digital discharge summary

- Legible handwritting
- EPIC
- Meditech
- Lab reports
- Imaging reports

POSSIBLE SOLUTIONS

For ER docs

- Use Frailty tool consistently
- Understand what type of facility the patient is coming from
- Consider the family support system (who are the SDM?)
- Understand the levels of care and the guidance it provides
- Refer to BEERS/STOP medication list before prescribing medications to elderly patients with frailty

For ER docs

- Write legibly
- Provide discharge labs, imaging, and summary notes
- Provide less nebulous specialty follow-ups (or provide name of specialist and clinic number if possible)

For LTC docs

- For hospital interventions, figure out an ideal time for such interventions (unless it is an emergency)
- Discuss case with on-call MD and find alternative solutions other than "sending to the ER"

For LTC docs

Notes from RN/MD of the last few days (see progression of condition)

– Notes from PCC?

- A direct phone (with extension) to reach the RN of the unit
- Phone number to reach the on-call physician
- Call the ER and speak to the ER doctor

For LTC docs

 Patients with Acute high Blood Pressure without end-organ damage do not need hospitalization

For LTC and ER doctors

For LTC and ER doctors

THANK YOU
